TEXAS A&M UNIVERSITY

ROBOTICS TEAM & LEADERSHIP EXPERIENCE

Fall 2026 Sponsorship Packet

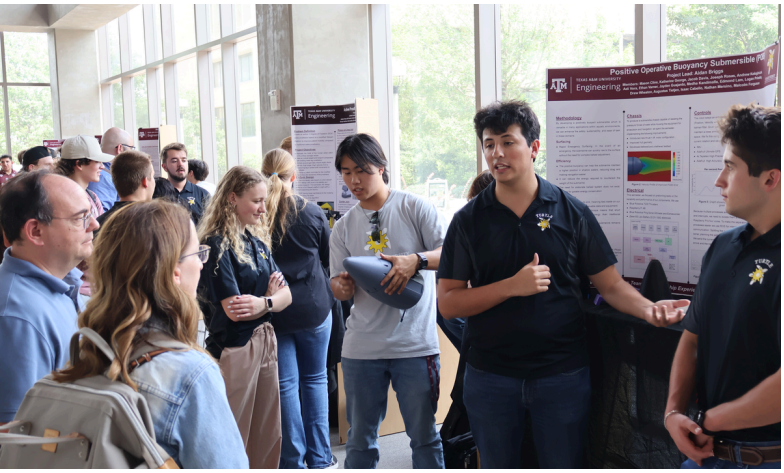
What is TURTLE?

TURTLE is Texas A&M's premier student-led robotics organization, where we bring our robotics ideas to life.

Our 19 multidisciplinary projects span from autonomous systems to prosthetic development, giving members hands-on, multi-disciplinary experience. Each semester, members present their progress and outcomes at our Project Showcase, connecting with peers, industry professionals, and the broader community.

We don't just teach engineering - we practice it, build it, and enhance it.

Why Support Us



We have the numbers.

We are the largest student-run robotics organization in the state of Texas, with nearly 400 active members.

We have the robots.

Our 18 R&D projects undergo rigorous scrutiny from our design review committee and experienced professors to achieve the best results.

We have the teachers.

Our 3 development programs span 2 universities, engaging cohorts of 480 new engineers. Seven active engineering organization presidents started in Hatchling.

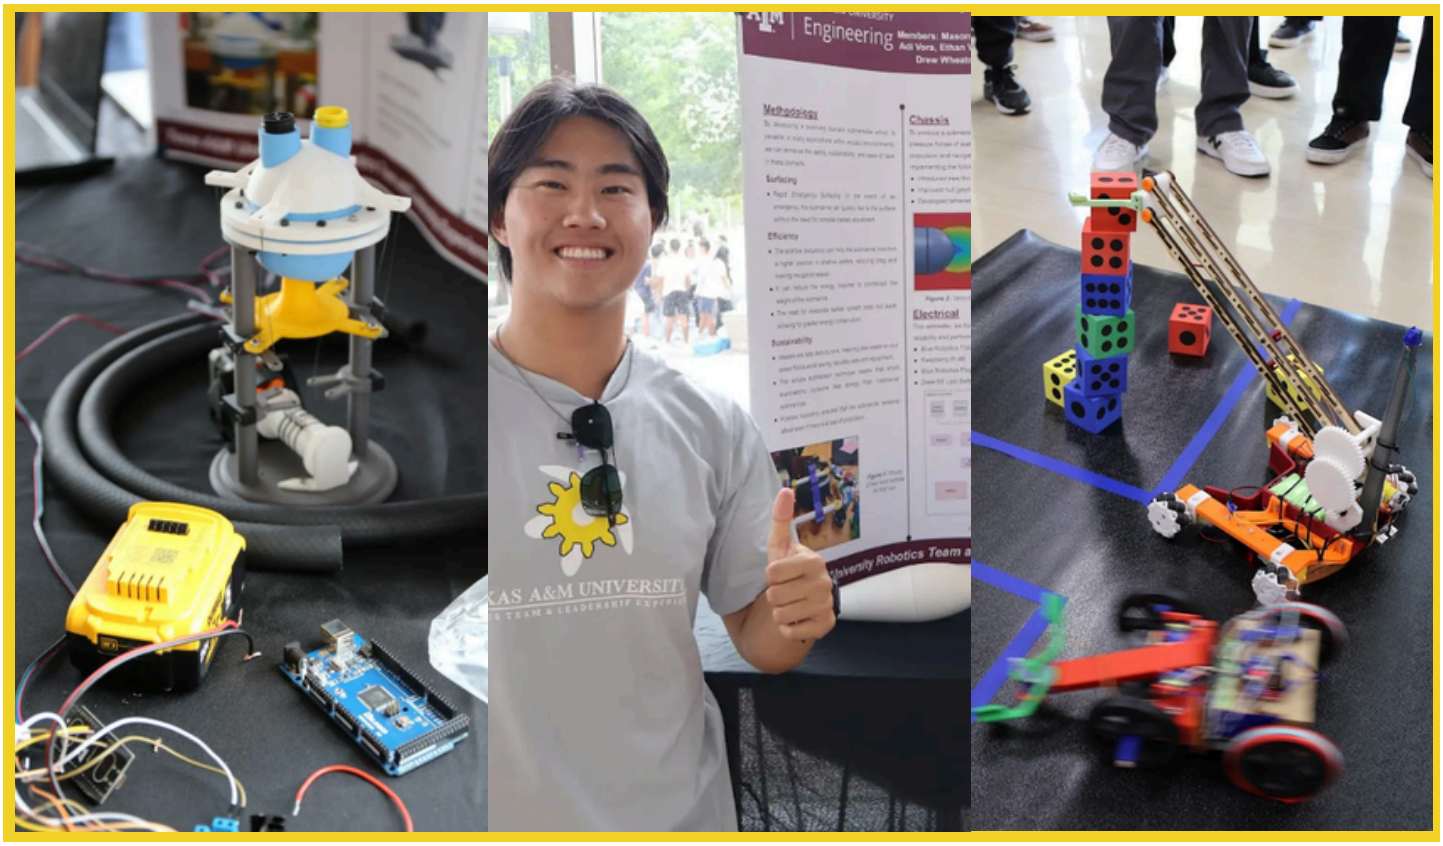
We have the leaders.

Our program is fully student-run. Undergraduates pitch the projects, define deliverables, manage budgets, and present results.

Research & Development

Our projects give students the opportunity to develop technical skills across electrical, computer, and mechanical engineering, experience that extends well beyond the classroom.

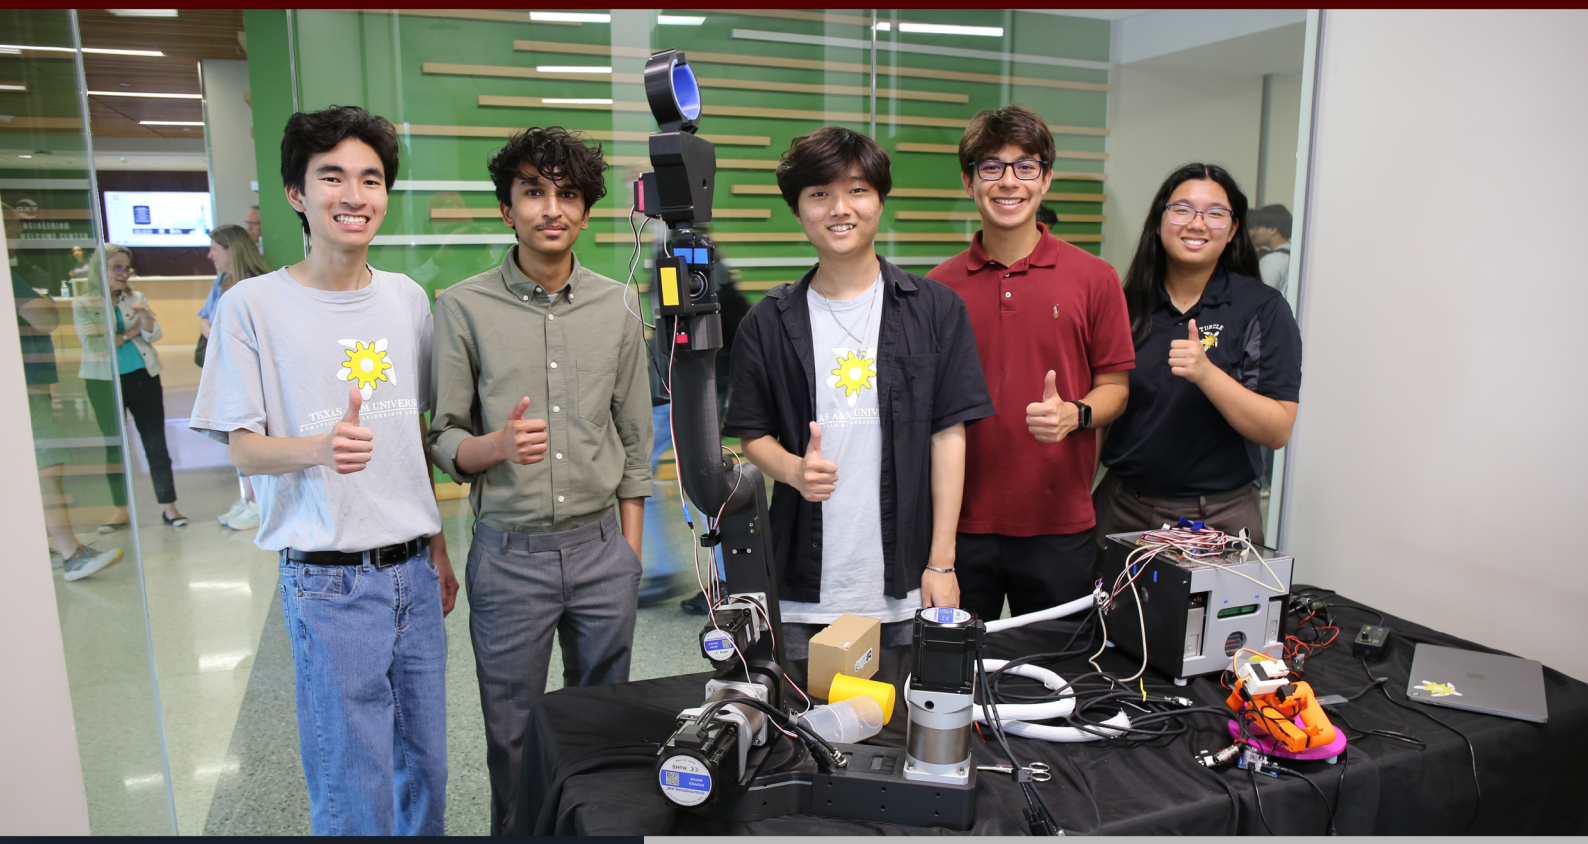
Electrical	Programming	Mechanical
Wiring Lab Tool Usage Microcontrollers Single Board Computers PCB design Actuation control Sensor Fusion and Calibration FPGA, Verilog	Python, C++, Git, GitHub, ROS2 Machine learning Autonomous systems Computer vision MATLAB, Simulink Human–robot interaction Trajectory/motion planning	SolidWorks (CAD), GD&T Design for Manufacturing (DFM) Finite Element Analysis (FEA) Computational Fluid Dynamics (CFD) Additive Manufacturing (3D Printing) Actuator Design Power Tool Training/Usage



Real projects. Real results. Built by students.

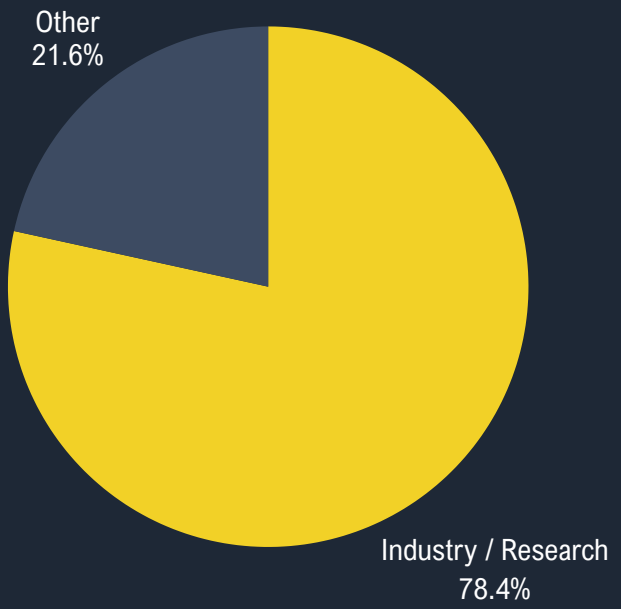
Support the Next Generation of Engineers & Impact Communities

TURTLE prepares undergraduate engineers through Hatchling, our structured training program that builds foundational skills in CAD, 3D printing, programming, and robotic controls. From there, members apply those skills to projects that address real-world challenges which span from agricultural research and soil quality monitoring, to custom prosthetic hands for children in need, to UAV swarm platforms that support first responders. These are just a few of the 19 active projects your support makes possible.



The Numbers:

Around 78% of our members each summer go onto receive their full-time offers, pursue a summer internship, research, or graduate school. Our members are prepared and ready for industry!



Industry Pipeline

The organization prepares new engineers through our development program to have basic knowledge of mechanical design for manufacturing, microcontroller usage, and wiring. When these engineers graduate to our advanced projects, they are able to specialize in one or many of these fields with extensive hands-on experience through making the robot come to life. For these reasons, members of TURTLE are far more qualified than other engineers that only have classroom experience, as TURTLE provides an opportunity to experience the entire engineering design process from start to finish.

Sponsorship Tiers

	Bronze $500	*Silver* $1500	*Gold* $3500	*Platinum* $4500

Your Role

By supporting Texas's largest student-led robotics organization, you will directly support the development of the next generation of leaders in engineering by:

- Funding new laboratory space
- Increasing our projects' budgets
- Widening our manufacturing capabilities
- Investing in future engineers through Hatchling
- Promoting projects focused on helping the community
- Donations are also tax-deductible

TEXAS A&M UNIVERSITY

ROBOTICS TEAM & LEADERSHIP EXPERIENCE

Your support helps hundreds of engineering students at Texas A&M University as they continue their educational journey in robotics. It would be our honor and privilege to work with your organization in completing our mission, and, on behalf of the entire officer team, we hope to see you soon!

Kalen Jaroszewski, President

Ryo Kato, Internal Vice President

Renee Zhu, External Vice President

Emily Tredemeyer, Project Vice President
